SKETCH OF PECS & VICINITY
SHOWING LOCATION OF URANIUM MINES

Approximate Scale -NOT TO SCALE
1 inch equals

" "

KEY

1 NOTE A- LARGE 3 & 4 STORY
2 APARTMENT HOUSES TO HOUSE
3 MINERS BECAUSE OF PLANNED
4 INCREASE IN URANIUM ORE PRODUCTION
5 ABOUT 20 APT HOUSES NEARLY
6 COMPLETED AS OF 21 NOV 1952
7
8 NOTE "B" LOCATION OF
9 LARGE (150 HOLD) FIELD
10 LEVELED. TO BE SITE OF
11 URANIUM ORE PROCESSING PLT
12 (MANY BLDG OF WHICH WERE
13 NEAR COMPLETION AS OF 21 NOV 1952
14 CONVEYER WERE TO CARRY ORE
15 DIRECTLY FROM THE MINES TO
THE PLANT. THE FIELD WAS
WELL DRAINED BY UNDERGROUND
DRAINAGE TILE LEADING TO A
NEARBY LAKE.

INSTRUCTIONS FOR USE OF SKETCH MAP GRID

1. This plotting grid has been devised to fill a need for a systematic method of producing accurate memory sketches. By the use of a 'grid-compass' system such as this, greater accuracy of scale can be achieved, and a frame of reference will be available for presenting interview information in graphic form.
2. The chart is divided into inch grids, which in turn are subdivided into five spaces. The scale would normally be 1 inch equals whatever distance the compiler would decide when beginning the sketch. A standard ratio such as 1"=100 meters, 1"=1 mile, etc., would be preferred, although any unit of measure, in either the English or metric system, is applicable.
3. The key reference point for originating a memory sketch using this plotting grid may be at the intersection of the compass lines at the center, or at any other point clearly marked by the compiler. This would be any fixed location with which he is familiar (e.g., a prominent industrial installation, railway station, compiler's home, etc.) If the only precisely known location is beyond the limits of the sketch map, a note should be made of the distance and direction in which it lies. Should the compiler be familiar with several sections of a given town or area but not the complete town or area, he could sketch several charts with a key reference point for each.
4. The memory sketch may be drawn directly on the printed grid, or it may be drawn on a semi-transparent overlay using the grid merely for determining distance and direction.
